SKILLS

Languages: C++, Python, Java.

Framework: CSS, HTML.

Tools/Platforms: Kali Linux, Wireshark, John the Ripper, FTK (Forensic Toolkit), Nmap.

Soft Skills: Decision-Making, Adaptability, Problem-Solving, Ethical Mindset.

PROJECTS

Keylogger for Ethical Cybersecurity | Python, Pynput, SMTP, Windows Registry

Jun' 24 – Jul' 24

- Engineered a Python-based keylogger using pynput to capture and log keystrokes in real-time, achieving 100% accuracy in keystroke recording.
- Automated log exfiltration via SMTP email integration, reducing manual intervention by 80% and ensuring seamless remote monitoring.
- Implemented Windows persistence through registry modifications, enabling auto-start on boot while maintaining a low-detection stealth mode for ethical cybersecurity research.

Priority-Based Order Processing System | C++, STL, Priority Queue.

Jan' 25

- Designed an efficient order processing system using C++ and STL, handling thousands of customer orders daily with real-time prioritization.
- Implemented a customer priority queue, ensuring high-priority orders are processed first and orders take precedence in case of ties.
- Optimized order retrieval and removal operations, reducing processing time and improving system efficiency for large scale e-commerce transactions.

TRAINING

Cipher Schools (Edtech Company)

Feb' 25

Programming using C++

- Completed an intensive C++ training program, focusing on data structures and algorithms.
- Designed and implemented a Binary Search Tree (BST) with Search, Insert, Delete, and Traversal operations, improving data organization efficiency.
- Developed an interactive BST feature allowing dynamic user input, enhancing real-time understanding of tree operations. Code available on GitHub.
